

MVP

1. Get a list of items from a SQL Database
2. Add and Subtract from a total
3. Add a line to the list

To-Do List

1. Finish wire frames and figure out more styling
2. Create a seed file for bit.io database
3. Build out bare bones of the front end for interior and exterior
4. Build out the “list” item html that will be duplicated for each item being displayed.
 - a. This will include plus/minus buttons
 - b. Zero Out button
 - c. Total
 - d. Description
5. Build out CSS
6. Implement the get request for the list (Get)
7. Build button to add to list (Post)
8. Build button to change total (Put)
9. Repeat process for exterior view. It will be very similar just with different data.
